A grayscale image of three avatars in a virtual environment. The avatars are wearing helmets and are positioned in a line, facing forward. The background is a textured, rocky surface. The text is overlaid on the bottom left of the image.

RED CIVIL, SL. was established in 1998. The experience and individual technical solvency of each component within the team as well as the large knowledge base the company possesses with regard to developmental work make up its potential, in place to carry out various proposed professional orders.

RED CIVIL, SL. is an independent engineering and safety coordination company that brings together a team of multidisciplinary professionals, who successfully carry out this wide range of activities: drawing up safety studies, coordinating project and execution stages for civil and construction engineering projects, safety audits, developer support and safety management.

A grayscale photograph of two men in construction attire. The man on the left is wearing a hard hat and a safety vest over a dark t-shirt, holding a clipboard. The man on the right is also wearing a hard hat and safety vest over a plaid shirt, and is pointing his right hand towards the right side of the frame. The background is a bright, hazy outdoor setting.

RED CIVIL, SL. carries out each of its orders as a unique prototype, within which safety is integrated and taken into account from the beginning of the project. We have in-house personnel and collaborators who make up a highly experienced professional team within the construction and occupational risk prevention sectors, offering a guaranteed high-quality, efficient and competent service.

Concern for man and his safety must
 always form the chief interest of all
 technical endeavours. Never forget this in
 the midst of your diagrams and equations.

Albert Einstein (1875-1955)

May 31. 1992

This is our goal. Throughout these years, we have been developing health and safety coordination work, both within the project and execution stages. We are committed to creating a professional bond with our customers, as an added value above and beyond our work, to achieve a safety benchmark and principle within the construction sector.

....once each project has been studied and assessed, we assign the most appropriate professional from within our team, boasting the necessary construction experience with regard to the type of work to be developed, and with specific training in health and safety, to provide a personalised, efficient and quality service to every customer.

**Safety
First**
